HydroComp Exhibits at Seawork International

First visit for USA firm in 2013

HydroComp, Inc. of Durham, New Hampshire USA is excited to be exhibiting at the 2013 Seawork Commercial and Marine International Conference for the first time this June. Founded in 1984, HydroComp, Inc. provides naval architects and ship builders with resistance and propulsion analysis solutions of the highest excellence. Their software and consultancy services provide designers, builders, operators, engine and propeller manufacturers, and government agencies with reliable and easy to use software programs for prediction and analysis of vessel speed and power performance.

“We have always been told by our software users that Seawork is a ‘must do’ show for HydroComp. We look forward to introducing HydroComp and our software products to Seawork attendees. Everyone wants greater fuel efficiency these days, and our products can offer these savings to the work boat market” according to Managing Director Jill Aaron.

HydroComp’s focus at Seawork will be providing demonstrations of their PropExpert software. <http://www.hydrocompinc.com/propexpert/HydroCompPropExpert.pdf>. This is for the sizing and analysis of propellers for work boats and pleasure craft. It provides the tools needed for the proper selection of propulsion system components – engines, gear and propeller – and has been selected as the principal propeller sizing tool of many of the best known manufacturers of marine engines and propellers.

Of course, HydroComp’s other software packages will be available for demonstration and review, including NavCad (for resistance and powering), PropCad (propeller CAD), SwiftCraft (speed and power for small ships), and SwiftTrial (sea trial documentation & analysis). For the first time in the UK, the new PropElements software for detail propeller design and analysis will be shown as well.

HydroComp will be in the Small Business Enterprise Section, stand SB 31.

About HydroComp

Celebrating its 29th year of operation in 2013, HydroComp provides software and services for the performance analysis and design of marine vehicles to industry, research, academic, and government clients. The company is proud to have served over 700 customers from more than 60 countries.
